NOVELTY - Pressure regulator assembly, for use in high throughput system, comprises a regulator body, a nozzle, and stem one end of which is attached a mounting rod. These are axially movable in the regulator body, with an adjuster that has a dual concentric **thread**, engaging mounting rod and stem in opposite direction at different rate.

DETAILED DESCRIPTION - Pressure regulator assembly, for use in high throughput system with a fluid channel, comprises inlet and outlet lines; a regulator body with a chamber in fluid communication with inlet and outlet lines connected to fluid channel inlet and outlet respectively, a nozzle connected to regulator inlet, with nozzle outlet adjacent to chamber, stem axially aligned with nozzle outlet, with one end forming regulating surface adjacent to the nozzle outlet and positioned to restrict fluid flow through the chamber to the regulator outlet, and the other end forming a mounting portion, to which is attached a mounting rod. These are axially movable in the regulator body relative to the nozzle outlet, with an adjuster that has a dual concentric **thread**, one engaging the mounting rod and stem in one direction at one rate relative to the nozzle outlet, and the other in the opposite direction at another rate. The difference between the two rates of movement of the threads

provides an attenuated movement of the regulating surface to selectively adjust a fluid flow pressure in the chamber. A drive mechanism is connected to the adjuster to rotate it for axial adjustment of the stem.

INDEPENDENT CLAIMS are included for;

(1) a microsampling device for use in a high throughput fluid system using the pressure regulator assembly, where an actuator is coupled to the stem between two positions;

(2) a high throughput liquid chromatography column to receive a selected sample for through flow, comprising a loading column and a separation column;

(3) a method of chromatographically separating a selected sample to achieve a desired separation using the above column; and

(4) a fraction collector assembly to collect a purified target portion of a selected sample, comprising a frame, a dispensing head movable along the frame along there axes, a receiving container with wells to accept the target portion, a docking station releasably holding the container and a computer controller to identify the docking position;

USE - The pressure regulator assembly is useful in high throughput purification of samples from a chemical **library**.

ADVANTAGE - Current methods for analysis of automatically synthesized compounds can produce erroneous results, due to excessive impurities, which require verification of additional samples, and hence increases cost and time to identify that a target compound has been located. Conventional purification techniques are very slow and expensive, and often require large amounts of solvent. Additional methods require careful pressure and temperature monitoring that is difficult to accurately and reliably control in the long term. High speed multiple chamber systems require complex and cumbersome operation. Further, erosive environments can damage the valve components, which calls for materials that are susceptible to breakage or cracking. The invention automatically, quickly and economically purifies samples.

DESCRIPTION OF DRAWING(S) - The drawing shows a multiple channel high throughput purification system.

NOVELTY - Debugger determines if window is available and if not starts

debuggee conventionally, creates message queue and calls fork creating child process. After processing creates work **thread** and after processing the debugger main **thread** waits for message on message queue. More processing takes place using operating system's debug facility and then debugger destroys message queue, as it's no longer needed.

USE - For providing some way to start the debuggee in a separate standard window or terminal session providing the program to be debugged start-up via shell.

ADVANTAGE - Allows debugging of programs that use the same curses **library**, for example.

TI Flexible coupling for rigid pipe sections - has connecting ring with inner **thread** to compress flexible pipe onto rigid one.
- L11 ANSWER 42 OF 318 WPIDS COPYRIGHT 2004 THE THOMSON CORP on STN  
TI Pneumatic-tyre carcasses **winding** equipment useful for tyre industry - comprises roller chain, with reverse arms, carries spool of carcass-reinforcing **thread** in relation to mandrel bearing inner carcass element.

L11 ANSWER 43 OF 318 WPIDS COPYRIGHT 2004 THE THOMSON CORP on STN  
 TI Mfg. coils or spirals from fruit gum strands - by using winder with minimum two **winding** units passing threading station cyclically.

L11 ANSWER 44 OF 318 WPIDS COPYRIGHT 2004 THE THOMSON CORP on STN  
 TI Pneumatic tyre making process - by passing locking **thread** additionally through loop of reinforcing **thread** on each pitch of **spiral winding, winding** it round side ring in plane of its cross section.

L11 ANSWER 45 OF 318 WPIDS COPYRIGHT 2004 THE THOMSON CORP on STN  
 TI Reinforcing **thread** fixing process for tyre-side rings - involves drawing out first branch under tension from fixing knot and then passing it through analogous branch of preceding loop.

L11 ANSWER 46 OF 318 WPIDS COPYRIGHT 2004 THE THOMSON CORP on STN  
 TI Pneumatic tyre mfg. process useful for tyre industry for high quality - by supplying reinforcing **thread** along equatorial plane of internal body and laying on surface by drawing out two loops simultaneously.

L11 ANSWER 47 OF 318 WPIDS COPYRIGHT 2004 THE THOMSON CORP on STN  
 TI Winder for **winding** and unwinding cables, wires, flexible tube, pipes or optical fibre - has winder with axial movement of drum and **spiral** guide to carry axially-fed filament from slot in shaft to rim of drum.

L11 ANSWER 48 OF 318 WPIDS COPYRIGHT 2004 THE THOMSON CORP on STN  
 TI Needle for surgical operations - has diamond-shaped point, and **spiral**-shaped shank with defined number of windings.

L11 ANSWER 49 OF 318 WPIDS COPYRIGHT 2004 THE THOMSON CORP on STN  
 TI Drilling equipment - has hard alloy cutters on lower end of drill rod.

L11 ANSWER 50 OF 318 WPIDS COPYRIGHT 2004 THE THOMSON CORP on STN  
 TI **Spiral** steel wire based mesh fabricator - comprises chuck rotating needle in threaded tube in order to **wind** two wires in one direction for cutting and orientation NoAbstract.

L12 6 L11 AND STORAGE

=> t ti l12 1-6

L12 ANSWER 1 OF 6 WPIDS COPYRIGHT 2004 THE THOMSON CORP on STN  
 TI Pulsed accelerator for generating beams of charge particles - has ends of uni-potential plates closed in forming strip lines and enveloping parts and ferro-magnetic fill.

L12 ANSWER 2 OF 6 WPIDS COPYRIGHT 2004 THE THOMSON CORP on STN  
 TI Plastics cap for screwed pipe end - comprises profiled strip wound in overlapping **spiral** with reinforcing mat.

L12 ANSWER 3 OF 6 WPIDS COPYRIGHT 2004 THE THOMSON CORP on STN  
 TI Yarn winder - has traverse guides reversed at stroke ends where units store energy and then release it.

L12 ANSWER 4 OF 6 WPIDS COPYRIGHT 2004 THE THOMSON CORP on STN  
 TI **Storage** and dispenser for thin, flat items - has numerous retaining compartments, interconnected by helical portion, for short compartment separation.

L12 ANSWER 5 OF 6 WPIDS COPYRIGHT 2004 THE THOMSON CORP on STN  
TI Threading ferrite cores of core store - by rotating wire about axis, while drawing from spool and threading through cores by friction rollers and axial airflow.

L12 ANSWER 6 OF 6 WPIDS COPYRIGHT 2004 THE THOMSON CORP on STN  
TI Packing system in sheet material - guides tear-open **thread** against item inside wrapping material.

AN 1987-328835 [47] WPIDS

AB EP 246585 A UPAB: 19930922

The items are stored flat in a series of flat compartment walls (20) which are supported by a **spiral** track (10) around a central shaft (30). As the shaft rotates, the compartments are moved axially.

The items are then moved past a transfer position for loading and dispensing. The **spiral** is formed by a flat strip wound around the shaft, which has a corresponding groove for the item supply and discharge via an aperture.

USE/ADVANTAGE - For handling banknotes or coins, with compact and reliable design.

5/14

ABEQ DE 3617063 C UPAB: 19930922

An arrangement for storing and dispensing thin objects (70) or sheets has a number of separable containers arranged one above the other which each two separated by at least two rotatable hollow cylinder elements (30") with helical outer slots. The cylinder elements are axially movable on a rotatably driven hollow shaft with one or more longitudinal slots.

The cylinder elements are adjusted in height by rotation of the shaft via a dog and **thread** arrangement and their slots are engaged by a helical part (10") with a number of **winding** surface corresp. to the number of containers. A roller arrangement (60',61') rotates in one direction for insertion and in the opposite direction for dispensing of the objects.

USE/ADVANTAGE - E.g. for storing and dispensing bank notes. A large number of objects can be stored individually and reliably dispensed individually using a compact system.

ABEQ EP 246585 B UPAB: 19930922

Device for storing and delivering thin flat articles comprising receiving compartments which are formed by trays (20; 20'; 20") and for the guiding and local separation of which cylindrical elements (30, 30', 30") having a helical groove (31; 31') are provided, and a means for supplying the articles having a opening (40; 40') stationary in a housing (50, 50'), characterised in that in the groove (31; 31') of the cylindrical elements (30; 30') a helicoidally formed member (10; 1U') is guided and each tray (20; 20'; 20") is fixedly connected to a respective convolution surface of the helicoidally formed member (10, 10').
